

Lake Erie Harmful Algal Bloom Forecast

2024-10-20

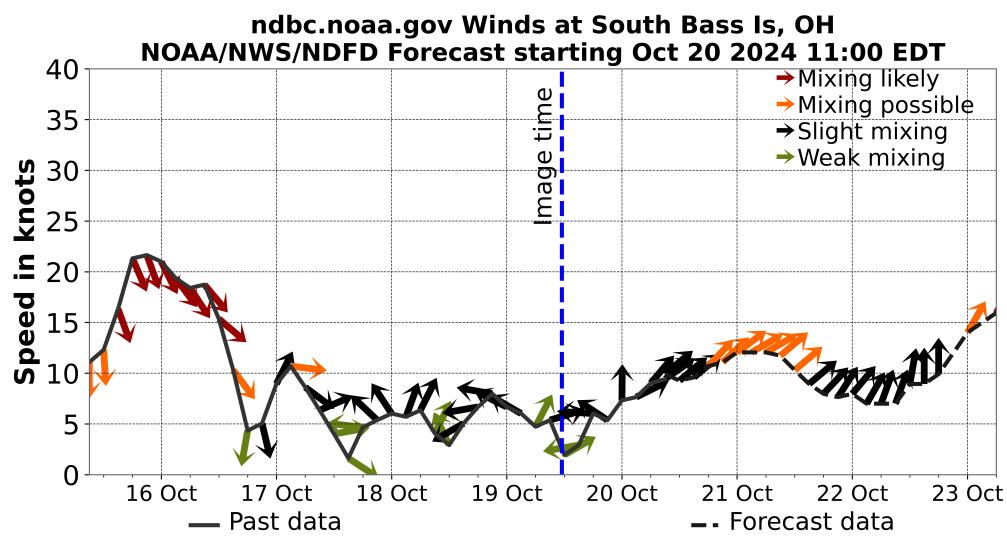

Summary

The cyanobacteria bloom in western Lake Erie has an approximate area of 30 square miles, which is a decrease in area since Oct 18. The *Microcystis* bloom continues to be present in western Lake Erie, but at reduced concentrations as compared to mid-September. As of October 17th, small patches of bloom were observed in Maumee Bay, OH and along the Ohio coast to Lakeside Marblehead. Sandusky Bay continues to have a local bloom of mixed cyanobacteria. No recent toxin data currently available. --NCCOS HAB Forecasting Team 17 October 2024.

The past few days of imagery can be seen at [the HAB monitoring site](#). The Lake Erie Forecast is operated by the National Centers for Coastal Ocean Science. Contact hab@noaa.gov for technical Questions. Last Updated: 2024-10-20 09 PM EST

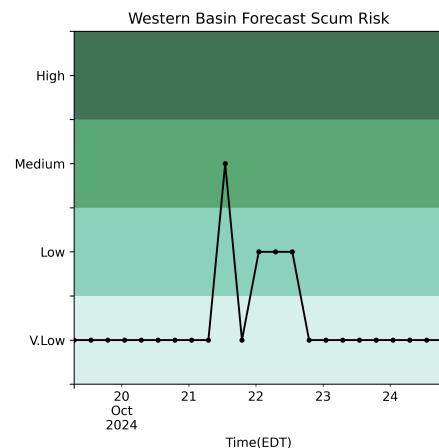

Current Lake Erie Sentinel-3 satellite imagery from the Ocean and Land Color Imager (OLCI) on Oct 19, 2024, showing bloom location and extent in the western basin. Grey indicates clouds or missing data. The estimated threshold of cyanobacteria detection is 20,000 cells/mL. Inset shows a truecolor image of the entire lake. Data derived from Copernicus Sentinel-3.

Wind speed and direction from South Bass Is, OH. Blooms mix through water column at wind speeds > 15 knots.

Lake Erie Harmful Algal Bloom Forecast

2024-10-20

Forecast surface bloom position for Oct 21, modeled from the last satellite image with water currents estimated from the Lake Erie Operational Forecast System (LEOFS). Potential for bloom movement is forecast in 3-dimensions with a hydrodynamic model using satellite imagery and currents. The modeled output does not contain clouds. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.

Forecast surface bloom position for Oct 24. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.
